FEEDING DIRECTIONS

Use the following table as a guide for the amount of feed to be fed per 100 pounds of bodyweight, according to designated horse type. Adjustments in these amounts should be based upon the quality of the forage (hay and/or pasture) the horse is consuming, size of the horse, and its degree of activity.

Horse Type	Daily Amt./ 100 lbs. Bodyweight
Mature Horse	0.5 to 1.25 lbs.

In order to reduce the risk of colic, always feed at least 1-2 pounds of hay or forage per 100 pounds of bodyweight. Also, evenly space feeding times throughout the day, never feeding more than 8 pounds of concentrate per meal.

During periods of hot weather (daily temperatures of 90 degrees or higher) and/or heavy sweating, mix 2 oz. of an electrolyte supplement into the horse's daily ration.
